

angularjs - remove currency filter paranthesis

I am using currency filter inside custom filter in `ui-grid` to format the cell data. Please find below my code.

```
HelperServices.filter('getQuantFormat', function($filter) {  
  return function(val) {  
    if (val == 0)  
      return;  
    else  
      return ($filter('currency')(val, "", 2));  
  }  
});
```

Here currency filter adds paranthesis for negative values. I want to use currency filter without paranthesis for negative values.

How do I remove paranthesis from currency filter ???

javascript regex angularjs

1 Perhaps, by using `.replace(/[()]/g, '')` ? – Wiktor Stribizew Jul 21 '15 at 7:06

1 Answer

I would suggest you to write a customCurrency filter. Which takes care of the negative values. Something like below :

```
var app = angular.module('myApp');  
app.filter('customCurrency', ['$filter', function ($filter) {  
  return function(amount, currencySymbol){  
    var currency = $filter('currency');  
    if(amount < 0){  
      return currency(amount, currencySymbol).replace("(", "-").replace(")", "");  
    }  
    return currency(amount, currencySymbol);  
  }  
}]);
```

So whenever you amount is less than zero, you can replace the parenthesis with the negative sign.

Hope this helps :)
